

SUPPORTI PER VENTOSE

I supporti e gli accessori illustrati e descritti in questa pagina e nelle successive sono gli stessi già descritti nelle pagine precedenti, al fianco delle rispettive ventose; quello che il cliente può trovare in più in queste pagine è l'elenco delle ventose per le quali ogni supporto è idoneo.

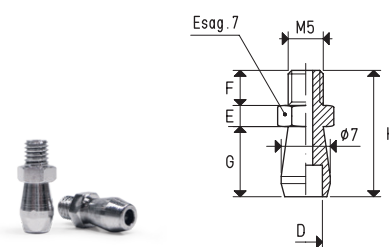

Appositamente sagomati per aderire perfettamente al profilo interno delle ventose, sono dotati di un perno assiale filettato maschio o femmina, per consentire l'aspirazione ed il fissaggio all'automatismo.

Le ventose possono essere calzate su di essi manualmente, con una semplice pressione e senza l'impiego di collanti.

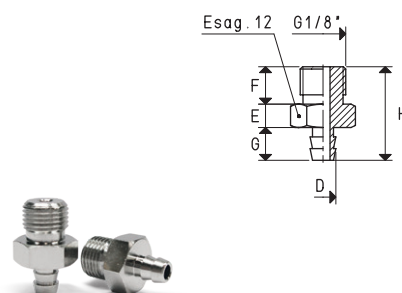

Sono prodotti in ottone nichelato, alluminio anodizzato e, a richiesta, con materiali speciali.
